

Aerial Work Platform

Aerial Work Platforms - There are different forklift accessories offered on the market. They can help transform your lift truck so that you can expand your ability to pick objects up or accomplish clean up jobs and material handling with greater ease.

Several attachments were specially designed for the forks themselves. For example, blade extensions could be utilized whenever you need a lot more fork length, which increases lifting capacity. Fork extensions come in lengths ranging from forty eight to one hundred twenty inches. Triangular or rounded accessories are another type utilized if transporting rolled material so as to ensure it does not roll off of the typical flat forks.

Lifting accessories can be pivoting and telescoping crane attachments. They come in many kinds. These attachments are often utilized for moving metal bars, poles, lumber or whatever type of bulky items. Additional accessories like for example various styles of hook plates and hooks are presented to be able to carry objects making use of a chain or sling. Slab lifters and magnetic filters are other items that can be used together with hook accessories. Slab lifters are specialized attachments which are utilized for picking up various materials that are delivered in a slab or sheet format. Rug rams or carpet poles are other lifting tools that connect to your forklift in order to make transporting rolls of carpet easier. The accessory hooks onto the forklift's blades and has a pole which goes through the middle of the carpet roll.

There are many kinds of lift truck attachment designed for facility maintenance such as snow forks. These industrial blades can be attached to front end loaders and used for transporting materials such as snow, dirt as well as mulch. Other common cleanup attachments consist of standard sweepers and magnetic sweepers. Standard sweepers consist of a broom which the lift truck forks hook onto for sweeping large spaces such as factory floors, parking lots and warehouse. The magnetic sweeper is the same except that it has a magnetic plate rather than bristles. The magnetic sweeper is used in places where there is lots of metal debris like on shop floors for example. Sweepers have widths up to sixty inches and this surface area makes clean up fast and easy.

A material spreader is another forklift attachment that is usually utilized at facilities. These spreaders are useful for a variety of applications like for example spreading ice melt, rock salt, pellets, seeds, fertilizers, insecticides and seed.

Another optional lifting attachment are work platforms. These can be utilized by several various businesses day by day. Platforms may vary in size from 36" x 36" to up to 60" x 60". Some models may be offered and are capable of folding up and storing into a smaller place. Work platforms are designed to raise staff up to an overhead location utilizing the lift truck. Larger platform models have additional space for personnel in order to carry tools and other essential objects meant for the task. Often work platforms are constructed of poly material or steel.
